For in all machines and structures beams appear in one form or another; and little progress can be made in scientific designing without a proper understanding; of the principles or fundamental facts underlying their construction. Hence great prominence is rightly given to this subject in all courses of applied mechanics, machine and building construction, and naval architecture. The following chapters, based on articles originally contributed to The Mechanical World, deal in an elementary manner with the main principles and considerations involved in designing beams and columns of such forms and materials as commonly occur in machines and structures. Although points of mathematical intricacy have been intentionally avoided, my aim has been to make the treatment thorough, within the limits prescribed, and the mode of presentation such as can be easily understood. On questions of fundamental importance...
