Reviews

A high quality pdf as well as the typeface applied was exciting to see. It really is written in simple words and phrases rather than difficult to understand. You will not really feel monotony at any time of your time (that's what catalogs are for relating to in the event you question me).

Not illustrated. 1921 Excerpt: .be gathered from the following statement made by Milne 1 in 1886: To determine how far tides may directly be connected with earthquakes, the necessary records have yet to be examined. The absence of any reference to such an investigation in Kikuchi s comprehensive review³³ of the Japanese work in seismology indicates that even at this date (1904) nothing of imxrtance had been done. About the same time (1904) Omori, in an investigation into the subject of the lunar-daily distribution of earthquakes,⁸⁴ was led to the conclusion that the effect due to the weight of the sea waters in the tidal motion was an effective agent in influencing earthquake frequency. Imamura too in an investigation into synodic monthly frequency³¹ reached the conclusion that the sea tides contributed a component in conjunction with barometric pressure which influenced the earthquake frequency. The problem appears to have been first sysematically examined by Omori, who has discussed it in his paper on the Secondary Causes of Earthquakes. 2 He investigated four distinct series of records which are as follows: (1) List of the recent stronger submarine earthquakes which originated along the-Fuji volcanic chain. (2) List of strong eaithquakes felt in Tokyo. (3) Stronger earthquakes whose centers were not much distant from Tokyo, inland origin. (4) Stronger earthquakes whose centers were not much distant from Tokyo, submarine origin. The tables prepared by Omori give the date and time of each earthquake and the nearest time of high or low water. A...
